CLAIMS

 A method for presenting at least a part of an object, comprising:

- at least partially dividing at least one object into a plurality of sub-objects;
- presenting said plurality of sub-objects in a first representation,
- making at least one sub-object of said plurality of sub-objects an active sub-object; and
- in response to a user operation on said at least one active sub-object, presenting at least one of said at least one active sub-objects in a second representation.
- 2. The method according to claim 1, wherein said at least one object and said sub-objects are 3Dobjects.
- 3. The method according to claim 1, wherein said at least one object is a page, and wherein said subobjects are areas.
- 4. The method according to claim 1, wherein in said user operation, at least one of said at least one active sub-objects is selected, and wherein at least said selected sub-object is presented in said second representation.

5. The method according to claim 1, wherein at least two sub-objects of said plurality of sub-objects are made active sub-objects.

- 6. The method according to claim 1, wherein said at least partial division of said at least one object into said plurality of sub-objects is based on a structure of at least a part of said at least one object.
- 7. The method according to claim 1, wherein said at least partial division of said at least one object into said plurality of sub-objects is based on a sectioning algorithm.
- 8. The method according to claim 1, wherein in said first representation, at least one sub-object of said plurality of sub-objects is scaled to a size that is smaller than the original presentation size of said respective sub-object.
- 9. The method according to claim 1, wherein in said first representation, at least one sub-object of said plurality of sub-objects is cropped.
- 10. The method according to claim 1, wherein in said first representation, at least one sub-object of said plurality of sub-objects is indicated by an icon.
- 11. The method according to claim 1, wherein sub-objects of said plurality of sub-objects with a size that is

above a size threshold, or that contain an amount of information that is above an information threshold are made active sub-objects, or both.

- 12. The method according to claim 1, wherein at least one of said at least one active sub-objects is automatically focused, or selected according to a selection criterion, or both.
- 13. The method according to claim 1, wherein in said second representation, said at least one active sub-object is scaled to a size that is larger than its size in said first representation.
- 14. The method according to claim 1, wherein within at least one of said sub-objects presented in said first representation, elements can be directly selected by a user.
 - 15. The method according to claim 1, wherein said plurality of sub-objects is composed of different types of sub-objects, and wherein at least one group of sub-objects of a second type is associated with at least one sub-object of a first type.
 - 16. The method according to claim 15, wherein said at least one active sub-object that is present in said second representation is said at least one sub-object of said first type, and wherein in response to a further user operation on said at least one sub-object of said first type, said at least one group of sub-objects of said second type associated

with said at least one sub-object of said first type is presented.

- 17. A computer program with instructions operable to cause a processor to perform the method steps of claim 1.
- 18. A computer program product comprising a computer program with instructions operable to cause a processor to perform the method steps of claim 1.
- 19. A device for presenting at least a part of an object, comprising:
- means for at least partially dividing at least one object into a plurality of sub-objects;
- means for presenting said plurality of sub-objects in a first representation;
- means for making at least one sub-object of said
 plurality of sub-objects an active sub-object; and
- means for presenting at least one of said at least one active sub-objects in a second representation.
- 20. The device according to claim 19, wherein said subobjects are presented on a display of a portable electronic device.
- 21. A system for presenting at least a part of an object, comprising:
- means for at least partially dividing at least one object into a plurality of sub-objects;
- means for presenting said plurality of sub-objects in a first representation,

- means for making at least one sub-object of said plurality of sub-objects an active sub-object; and

means for presenting at least one of said at least one active sub-objects in a second representation.
